

Quick Reference Guide for HTML E-Form Variables

Index Field Variables for HTML E-Forms

HTML Variable	Description
\$\$Field1\$\$ or \$\$F1\$\$	Displays the value stored in FileBound for Index Field 1.
\$\$Field2\$\$ or \$\$F2\$\$	Displays the value stored in FileBound for Index Field 2.
\$\$Field3\$\$ or \$\$F3\$\$	Displays the value stored in FileBound for Index Field 3.
\$\$Field4\$\$ or \$\$F4\$\$	Displays the value stored in FileBound for Index Field 4.
\$\$Field5\$\$ or \$\$F5\$\$	Displays the value stored in FileBound for Index Field 5.
\$\$Field6\$\$ or \$\$F6\$\$	Displays the value stored in FileBound for Index Field 6.
\$\$Field7\$\$ or \$\$F7\$\$	Displays the value stored in FileBound for Index Field 7.
\$\$Field8\$\$ or \$\$F8\$\$	Displays the value stored in FileBound for Index Field 8.
\$\$Field9\$\$ or \$\$F9\$\$	Displays the value stored in FileBound for Index Field 9.
\$\$Field10\$\$ or \$\$F10\$\$	Displays the value stored in FileBound for Index Field 10.
\$\$SEP\$\$	Displays the name of separator that the document is stored within in FileBound
\$\$DIV\$\$	Displays the name of divider that the document is stored within in FileBound
\$\$DOCID\$\$	Displays the FileBound document ID.
\$\$ID\$\$	Displays the FileBound Form ID. (Should be displayed using the barcode font. Use this when creating a barcode to have the form scanned back in FileBound.)
\$\$USER\$\$	Current user's contact name (full name) if available, otherwise it is the user name.
\$\$USERID\$\$	Current user's ID
\$\$DATE\$\$	Current date that the e-form is created
\$\$TIME\$\$	Current time that the e-form is created
\$\$NOW\$\$	Current date and time that the e-form is created.

Sample Code for Different HTML Input Types

Input Type	HTML Code
TEXT INPUT	<code><input type=text name="Sample" value="\$\$Sample\$\$"></code>
TEXT AREA	<code><textarea name="Sample">\$\$Sample\$\$</textarea></code>
CHECK BOX	<code><input type=checkbox name="Sample" \$\$Sample\$\$> Select Sample</code>
RADIO BUTTON	<code><input type=radio name="Sample" value="option1" \$\$Sample\$\$> Option 1 <input type=radio name="Sample" value="option2" \$\$Sample\$\$> Option 2 <input type=radio name="Sample" value="option3" \$\$Sample\$\$> Option 3</code>
SELECT BOXES	<code><select name="Sample" <option value="option 1" \$\$Sample\$\$>Option 1 <option value="option 2" \$\$Sample\$\$>Option 2 <option value="option 3" \$\$Sample\$\$>Option 3 </select></code>

HTML Submission Forms for FileBound

HTML pages can be used to submit file information into FileBound. The submitted file information can then be used to populate an e-form stored within FileBound. The e-form can then be routed down a predefined workflow route if necessary. Below are the additional HTML tags that will need to be placed within the HTML code to handle the submission of the file information into FileBound.

For the HTML submission process to work, the HTML2EFORM plugin must be installed on the FileBound server that the information will be submitted to. This plugin is already installed for all ASP sites. For In-House installations please contact the Marex Group at support@marexgroup.com for the HTML2EFORM plugin.

Sample HTML Code for Submission Form

Below is sample HTML code that could be used as a template when creating a HTML submission form to submit file information into FileBound. For additional information, consult the FileBound user's manual.

===== HTML Code Begins Here =====

```
<html>

<!-- Change the server name that the information will be posted to -->
<form method=post action="http://demo1.filebound.com/plugins/HTML2EFORM.asp">

<p>
Name: <input type=text name="Name" value=""><br>
Social Security Number: <input type=text name="Social Security Number" value=""><br>
Home Phone Number: <input type=text name="Home Phone Number" value=""><br>
Date of Birth: <input type=text name="Date of Birth" value=""><br>
Loan Amount: <input type=text name="Loan Amount" value=""><br>
Bank Representative: <input type=text name="Bank Representative" value=""><br>
Address: <input type=text name="Address" value=""><br>
City: <input type=text name="city" value=""><br>
State: <input type=text name="state" value=""><br>
Zip Code: <input type=text name="zip" value=""><br>
Maiden Name: <input type=text name="maidenname" value=""><br><br>
<input type=submit><br>
</p>

<!-- FileBound Destination Variables -->
<input type=hidden name="ProjectID" value="125"><br>
<input type=hidden name="EFormID" value="47"><br>
<input type=hidden name="FBRouteID" value="73"><br>
<input type=hidden name="Extension" value="html"><br>

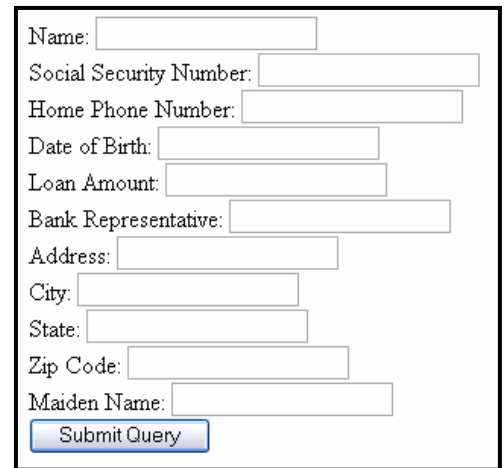

<!-- HTML to FileBound field mapping -->
<input type=hidden name="FBField1" value="Name"><br>
<input type=hidden name="FBField2" value="Social Security Number"><br>
<input type=hidden name="FBField3" value="Home Phone Number"><br>
<input type=hidden name="FBField4" value="Date of Birth"><br>
<input type=hidden name="FBField5" value="Loan Amount"><br>
<input type=hidden name="FBField6" value="Bank Representative"><br>

<!-- Error page mapping -->
<input type=hidden name="OKPage" value="http://demo1.filebound.com/submitsuccess.html"><br>
<input type=hidden name="ErrorPage" value="http://demo1.filebound.com/submiterror.html"><br>

</form>

</html>
```
